Products & Publications

Home / Products & Publications

It is a goal of INCOSE to share its wealth of knowledge with the community. Products and Publications include Periodicals, Technical Products, Board of Directors (BOD) Guidance and pertinent products available in the INCOSE Store. Most are available electronically as a benefit of membership; some have a fee.

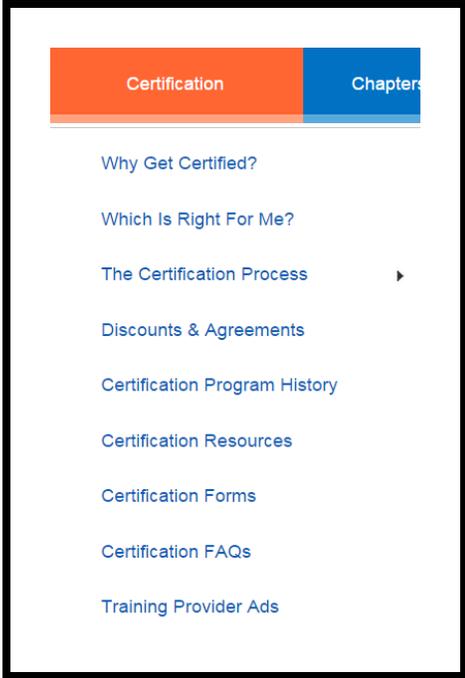

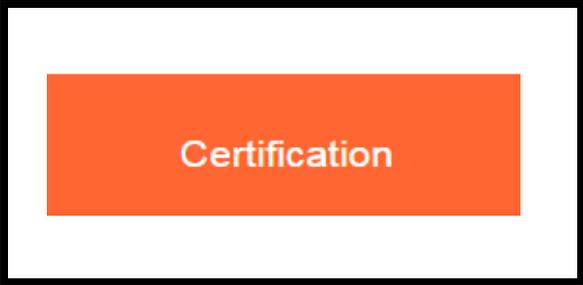

Symposia Products and Resources

INCOSE's annual International Symposium, with peer reviewed papers, is presented in a different global venue each year. You may obtain past proceedings and or individual papers through Wiley Interscience.

Chapters also host regional Symposia and meetings with proceedings.

INCOSE Technical Products

INCOSE's diverse members contribute to a unique set of Systems Engineering Technical Products and Resources. INCOSE Technical Operations codifies and juries this information for member use. You can find, for example, the SE Handbook and the Systems Engineering Professional Certification Program.

Home / Certification

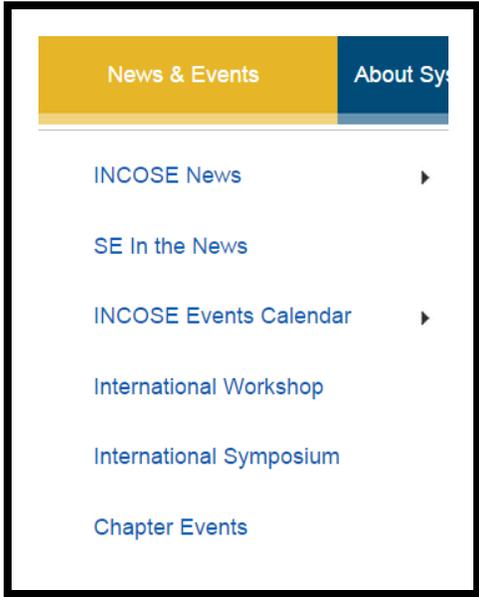

The International Council on Systems Engineering has established a multi-level Professional SEP Certification Program to provide a formal method for recognizing the knowledge and experience of systems engineers, regardless of where they may be in their career.

Multi-Level Base Credentials

The base ASEP, CSEP, and ESEP credentials cover the breadth of systems engineering at increasing levels of leadership, accomplishments, and experience.

About Systems Engineering

Home / About Systems Engineering

About Systems Engineering

The SE perspective is based on systems thinking. Systems thinking is a unique perspective on reality—a perspective that sharpens our awareness of wholes and how the parts within those wholes interrelate. When a system is considered as a combination of system elements, systems thinking acknowledges the primacy of the whole (system) and the primacy of the relation of the interrelationships of the system elements to the whole. Systems thinking occurs through discovery, learning, diagnosis, and dialog that lead to sensing, modeling, and talking about the real-world to better understand, define, and work with systems. A systems thinker knows how systems fit into the larger context of day-to-day life, how they behave, and how to manage them.
